ABOUT THE SEMINAR

As India strives towards achieving the vision of a "Viksit Bharat" (developed India) by 2047, the role of social sciences and accessible knowledge becomes paramount. This two-day national conference brings together librarians, social scientists, researchers, policymakers, and stakeholders to explore the transformative potential of digital libraries in this journey.

The seminar will delve into the critical aspects of building a robust digital infrastructure for social science research. Discussions will focus on the development and curation of digital collections, the preservation of India's rich social and cultural heritage, and the application of AI and machine learning to enhance accessibility and user experience within digital libraries.

A key theme will be bridging the knowledge gap. The conference will address strategies for enhancing digital literacy and promoting information dissemination for social and economic empowerment, particularly in rural communities and underserved populations. It will also explore the crucial role of digital libraries in combating misinformation and fostering digital citizenship, essential elements for a thriving Viksit Bharat.
